PROFILE:

Entry-level Cloud & DevOps Engineer with hands-on experience building CI/CD pipelines, containerizing applications with Docker, and deploying to AWS in production environments.

EDUCATION:

B.Tech, Electronics and Telecommunication
S.B. Jain Institute of Technology Management and Research Nagpur

WORK EXPERIENCE:

DevOps Intern | Healthletic Lifestyle Dec 2025-Present

- Built CI/CD pipeline using GitHub Actions + Docker + AWS ECR for backend deployments.
- Automated EC2 deployment via AWS SSM, removing manual server access.
- Containerized Node.js backend with Docker & Docker Compose.
- Fixed production issue caused by ARM vs AMD image architecture mismatch.
- Collaborated with backend team to streamline build and release workflow.

Associate Systems Engineer | Braves Technologies March 2025 - May 2025

- Wrote a Python log scanner using keyword matches to extract error events with timestamps and context; exported CSV/JSON for quick analysis.
- Automated extraction from unstructured logs to CSV for QA, cutting manual prep by ~40%.
- Partnered with QA/dev for regression testing and root-cause; documented runbooks that reduced repeat issues ~25%.

AWS Cloud Intern | F13 Technologies Feb 2025 - May 2025

- Completed AWS Partner accreditations: Accreditation (Technical), Cloud Economics, Generative AI Essentials.
- Attended instructor-led sessions on core AWS services (EC2, S3, IAM, VPC, RDS, Lambda, CloudWatch) and basic security/networking.
- Created and presented an AWS reference architecture diagram for a sample company (e-commerce): Route 53 + CloudFront, ALB + Auto Scaling for web tier, RDS, S3 for static assets, IAM roles/SGs; documented key trade-offs using the Well-Architected pillars.

Projects:

- ❖ **Cloud-Native Two-Tier Application with Docker, Monitoring & CI/CD**
 - Containerized frontend (HTML/CSS) and backend (FastAPI) services using Docker, with persistent storage and a unified docker-compose setup.
 - Deployed the complete two-tier stack on cloud, exposing both frontend and backend publicly.
 - Implemented end-to-end observability by configuring Prometheus to scrape backend metrics and creating Grafana dashboards for CPU, memory, latency, and request patterns.
 - Automated the build → test → Docker image → push → deploy workflow using GitHub Actions enabling repeatable cloud deployments.
- ❖ **Kubernetes Deployment Pipeline for a Python Flask Service**
 - Dockerized a Flask app and deployed it to Kubernetes via a custom Helm chart, enabling repeatable, versioned releases and zero-downtime redeloys in test.
 - Implemented a GitHub Actions pipeline to build images, run Trivy security scans, and push to Docker Hub, shrinking release effort by ~80% vs manual commands.
 - Added a parameterized deploy.sh script (env, version, namespace) to standardize rollouts and cut config-related deployment errors by ~50% during practice runs.
- ❖ **Task Master App ([Link](#))**
 - Developed and deployed a Node.js Task Management App on AWS EC2, fully automated with Docker and GitHub Actions.
 - Implemented CI/CD pipelines for automatic build and deployment on every GitHub push.
 - Integrated a persistent SQLite database for reliable task storage.
 - Achieved complete DevOps automation from code commit to live app deployment, demonstrating hands-on cloud workflow.

SKILLS:

- AWS (EC2, S3, IAM, VPC, ALB, Auto Scaling, CloudWatch,ECR)
- Docker, Docker Compose, Kubernetes, Helm
- GitHub Actions, AWS CodeDeploy, Git, Jenkins
- Prometheus, Grafana
- Linux, Networking (DNS, Security Groups, ports)
- Python

CERTIFICATIONS:

- > **DEVOPS-Udemy** (2025)
- > **AWS Solutions Architect Training** (2024)
